

R.A. LANGHEINRICH METEORITES

METEORITE AUCTION CATALOG

METEORITE AUCTION AT THE TUCSON GEM AND MINERAL SHOW 2008

Founded by prominent collector [Allan Lang](#) in 1971, the R.A. Langheinrich Meteorite Collection is one of the foremost private collections in the world. Comprising hundreds of witnessed falls; unique historic documented meteorites — many with original museum numbers and specimen cards; large irons with unusual character; and lunar and planetary material, the collection is internationally recognized as an important reference and research resource. Many specimens were acquired by the collection through institutional trades with the world's major museums.

Much of the Langheinrich Meteorite Collection is viewable online in the [R.A. Langheinrich Museum of Meteorites](#), and private viewings can be arranged by appointment. Occasionally, specimens from the collection are made available for sale to private collectors and institutions. The specimens shown below will be **offered at auction on Friday night, February 15, 2008 at the Stack's auction in the Tucson Convention Center during the Tucson Gem and Mineral Show.**

Please note our lot numbers are from 291 - 306. Our auction specimens can be viewed below. The auction pieces can also be viewed by clicking "browse lots" on the Stack's auction web site. For more information on registration, bidding and to view the on-line auction, click on to the Stack's Tucson Auction Link below. You will be able to bid on-line even if you are not able to attend the auction.
